Faculty meets with Trustees

Alternate plan presented

by Natasha Richardson

The IIT faculty has been making history this semester. The culmination of years of discussion and debate is the presentation of an alternative plan for the faculty. The student leaders finally met face to face with the top man of the university’s trustees.

On October 18, three of the University Faculty Planning Committee members, Drs. Ernst, Bettemach, and SAXON, met with Robert Galvin, Chairman of the IIT Board of Trustees. Ernst is the chairman of the faculty senate, Bettemach is the department chairman of the Department of City and Regional Planning, and SAXON is a member of the Senate Coordinating Committee.

For two hours, the IIT faculty members spoke with Galvin about the faculty’s proposed budget plans for 83-85 and 85-86. The main theme of the plan was a rearrangement in the governing structure of the IIT faculty. Galvin presented the IIT faculty with a new plan to the full Board of Trustees on Friday, October 19th. That meeting was tightly packed and IIT faculty could not cover it. However, reliable sources indicate that the normal format of the faculty meetings has been followed.

The UFFC representatives also explained that, in most cases, department chairs, deans, and directors are more qualified to make decisions about budget cuts in their departments. According to Bettemach, “the administration would be a lot more willing to put ten years ago, without asking anyone else.” The administration needs to get advice from the faculty in order to produce an effective budget plan. There are several variables involved in analyzing the cost effectiveness of a department. The number of professors needed to cover the courses, amount of equipment, gifts restricted to use by the department, and the number of students enrolling are a few.

These variables were overlooked or inaccurately measured by the administration when the initial budget cuts were made. (Continued on page 2)

Walking Plan to begin

by Eric Stendel

The IIT Combustor Walking Plan goes into effect this week. The walking plan is sponsored by the Student Life Office to help commuter students get to the State Street and Lake-Durango El stations.

The plan begins this week due to the change in daylight savings time, and serves students from about 4:45 to 10 p.m. Students should meet every ten to twenty minutes in the library lobby. A call-ahead service will be added when library renovations are completed.

The walking plan groups three or more students together to walk each other to the El stations. Campus security has agreed to monitor the situation from the library to the El station, the program therefore is designed for walking in between campus buildings, as well.

If no other students are using the service, students should continue campus security at X334 and ask for a security escort. Campus security will supply a squad car or security personnel, depending on availability.

This security service is only for students going to the El stations who have already checked on the student life walking plan. Students should wait in the library lobby after calling for a security escort.

It is important to meet at the library so that students not in a pre-planned group can join and students know where to call if they can’t be in a group. The library lobby is a safety point for students both using the student life program and waiting for security personnel.

The walking plan started two weeks ago and due to much publicity at that time was very successful. Students planned ahead, meeting friends at the

Ernst defends plan

by Ned Liddell

The IIT Board of Trustees responded late last week to the faculty’s offer of help in resolving the university’s current problems and disputes. The response was not one expected by faculty leaders.

It looks like the Board has decided that they’d like to teach the classes next year, commented a member of one of the committees which worked to develop an alternate budget proposal including cost saving proposals totaling over $200,000 (see Tech News 10/5, 10/6).

The full text of the Executive Committee Resolution is included in this issue of Tech News. The resolution was given to Dr. Frederick Ernst, head of the Faculty Senate, last Monday afternoon. Each faculty member was sent a copy by campus mail.

Dr. Ernst and members of the Senate Coordinating Committee spent a significant portion of Friday discussing the resolution and their own next step. “It’s something with which we will be able to cope, but we have a lot of work to do to see that this year is not wasted,” Ernst commented.

(Continued on page 3)

IIT student attacked

by Ned Liddell

An IIT student and her female companion were attacked at the lakefront early Saturday morning. At approximately 2 a.m., the student and his friend drove to the 51st St. beach and walked out to the pier. There they were approached by two black males.

One of the men pulled a gun, robbed them, and then held it on the student while his companion raped the woman. The student began struggling with the assailant holding the gun and managed to push him off the pier into the water, receiving a gash to the head. The other attacker left the woman to aid his acquaintance, who could not swim, allowing her and the student to free

Martin reacts to faculty plan

by Ned Liddell

The Executive Committee of the Board of Trustees was asked to write a resolution to “express the sense of the Board,” according to IIT President Thomas Martin. The resolution was to be “contemplative” with the withdrawal of the controversial Appendices A & B.

A IIT students

back to the car.

The couple drove from the beach, the student bleeding from his wound, and managed to hail a Chicago Police car within a few blocks. The police immediately went to the beach where they found the woman still trying to pull her friend from the lake and arrested both on the spot. The women were brought in and recovered the couple’s wallets as well as the gun used to assault.

The two men will be charges Monday with rape and attempted murder. The woman was treated and released. The student was hospitalized and released the next day.

Ernst defends plan

Caption: .................................................................

Name and Phone: .............................................

Address: ..........................................................

All you have to do is think up a fantastically funny caption for the photo and send it to Tech News (5th floor Main Building) where it is awaited with bated breath. The prize is the nearly overwhelming thrill of seeing your name in print.

For you and for the world, Peace Corps will combine your international service training to prepare you for a volunteer position in Education, Health and Sanitation, Agriculture, Family Planning or other areas. Train yourself, learn a new language, experience a new culture and gain a whole new outlook on how you can apply your education to help create new solutions to the basic problems of developing nations.

Information Session:
Nov. 1st, 7-9 p.m. at Herman Hall Rm 301
Interviews: Nov. 2nd at Placement Office
Tech Entrepreneurs

Tech Entrepreneurs will meet Thursday, November 1, from 9:30 – 10:30 a.m. in Room 301 of the Hunt Library. The Renaissance pancreatic cancer researchers. Carrers, a 1940 graduate of the Armour Institute of Technology (B.S., E.E.), is the holder of the important patents, awarded in the early 1940s, which resulted in the development of the transistor. Carrers’ breakthrough came through the emergence of that technology in ways parallel to the more recent emergence of computers. Carrers now at the Illinois Institute of Technology, is known to many IT students as the instructor for ECE 384, Electrical systems. The meeting will be held in the Friel Room, Hermann Hall from 12:15 to 2:00 p.m.

On November 15, students will hear Professor James S. Sprowls address a closely related subject, “The Emergence of Nanotechnology and its Infringement on Our Information Security.” Sprowls, a member of the faculty of Chicago-Kent School of Law and the American Bar Association’s Privacy and Information Security Committee, specializes in patent law and in computer-assisted legal research.

For more information about Tech Entrepreneurs, contact Omar Hamid (824-8474) or Dr. Richard Retig (557-5218).

Eta Kappa Nu Meets

Meeting for all members Tuesday, Nov. 6th at 12:30 in Room 302 HUB. We will conduct our business for the rest of the semester and plans for next semester. All new members should be present. Any members that have not received their certificates from last semester or this semester will be able to get them at the meeting.

Make contact

ATS (Association of Tech Students) will be publishing the telephone student directory, called Connections, for the 84-85 year. Unfortunately, ATS funds are not available to pay for this service and we need your help! Therefore, the publication will be sold at a nominal cost. If you want any information about the directory you can pick up donation forms at the Student Affair Office or at offices where the HUB and Campus Complimentary形式必布ext be returned to the Student Life Office by Nov. 9, 1984. Make sure you include the amount of cash, in the envelope, for the directory will be accepted. The envelopes will be sold on Wed. and Fri. from 12-1 pm this week and Tuesday and Thursday of the following week at the same time: Pre-publication cost will be half of the post-publication cost. Order your copy now.

Learn about waste

The next AICE meeting will be held on Tuesday, October 30. The meeting will begin at 12 noon and will be held in room 313. The guest speaker for this meeting will be Elka Nakamoto from the Environmental Protection Agency. We will talk about Waste Management and Air Pollution. Refreshments will be served. All are welcome.

Hail a saint

The traditional All Saints’ Day celebration, Thursday, November 1st, will be observed at IHIT Chapel with a Eucharist - Holy Communion celebration at 12:15 and 5:15 p.m. The service is open to the IHIT community.

Study abroad

Application deadline for Fulbright Study Grants Abroad has been extended until December 5th. Anyone interested in pursuing graduate study abroad is encouraged to visit the Office of International Relations, Roberts Hall, for more information.

Get your manuals

The Pi Tau Sigma Honorary Fraternity is currently selling the Engineering in Training (EIT) Review Manual for a price of $20.00. The regular price is $32.00 at the book store. The manual can be used for preparation during the license examination. The certificate engineers will be taken the EIT exam last semester and review the exam with this manual. All engineering disciplines are included in this manual. Purchase orders can be made from a Pi Tau Sigma member or sent to Ed Chrzastowski in Room 112 E1 on Thursdays. If unable to meet either, leave name and phone number on blackboard in room 112 E1 and we’ll contact you. Orders will be processed from November 8, 1984 and delivery should be before Christmas vacation.

Central for Jackie

On Friday, November 18, 1984 from 12:00-7:00, the "Central for Jackie" will be held in Keating Hall. This central is a fund raiser to help the IHIT resident student, Jackie Mibehem, pay her medical bills incurred through a recent surgery.

Any organization interested in setting up a booth or some games, contact Andy Rajek (5909) or Laura Beghejanci (5903) or drop it note to Roni in North Dorm's mailbox: 111 in the Programming Office.

Weekly planning committee meetings are being held at 7:00 p.m. on Sunday evenings, Council Lounge in the residence halls. Anyone interested in helping Jackie raise her money, contact.

budget

One of the major tasks of the student government is to manage the student fee money. The UFPC thinks that these types of errors can be minimized if the administration and faculty work together. Another idea presented to Galvin was to cut down the size of the administrative department, administration, according to Belmanic, is too large and cumbersome. In the past, the years the administration has developed much faster than the size of the student body, and it needs to be trimmed.

The elimination of departments that are not used or that are being obsolete can also reduce expenses. Professors in these departments could be transferred into other departments, given administrative positions, or let go. Since the university’s budget is a changing society, some lose the interest of students. They promised to look into these and other ways of reducing costs.

No? Get smarter!

Are you a student in one of the classes that require you to study for exams? Are you interested in studying and learning new things? Here is your opportunity to learn a new skill.

Get your packets

Spring 1985 registration packets can be picked up in the Office of Student Records & Registration (104 Main Building) on November 15th and 16th from 9 a.m. to 5 p.m.; full-time students only. Varsity athletes can pick up their packets on November 14th. All part-time students packets will be mailed the week of November 19th.

Think your smart?

Do you answer your friends’ Travel Faxes? Do you know all the answers? In about 9 months your mind will cram with bits of useless knowledge.

Think you answered, "yes." To any of the above questions now the time for you and three friends to organize a team for College Bowl, the varsity sport of the mind.

An Intramural College Bowl Tournament will be held at IHIT on December 5. The winners of the student tournament will play a faculty all star team on December 6 before advancing to the Regionals in February.

Start organizing your team of four (plus one alternate now) and watch this space for details.

Interview sign-ups

Monday, October 29, 1984 – None

Tuesday, October 30, 1984 – Inger, BS, MS, PhD in EE, CS, Math or Physics. US citizenship required. Interview date is Nov. 13, 1984.

RESEARCH
As the stomach turds

by Jim Trione

and Joe Gattone

The Surgeon General has declared that smoking is hazardous to your health. Health
teachersespouse the dangers of alcohol and drug abuse. Armed
muggers roam the streets, and the
Soviets are amassing thousands of
nuclear warheads as we "danger
surrounds us in every day of our lives.
Indeed, we have become so accustomed
to its ominous presence we have failed to
recognize the most obvious and
terribly threat to mankind. Yes, it is
the Soap Opera.

No invention in the history of
man's existence has surpassed the
soap opera in utter stupidity. The
plots are illogical and
overwhelmingly sensational. Where
else could "Roger" be presumed
dead in a plane crash in the Andes,
and then return home to Soapville
after eight years only to find his
wife, now living comfortably off
his life insurance. Fooling around
with the Chief of Police, who, it
turns out, is looking around with
Roger's wife. Wonder who, like
Maria, a domestique. Roger picked up
on his trip up the Andes, is unaware
that Roger and the Chief,
through a case of double amnesia,
have forgotten that they are
actually fraternal twins.

The soap opera turns the
brain to mush. It lacks substance.
The viewer rationalizes that the
soap opera offers an escape from
reality is absurd. The trials and
tribulations of reality are nothing
compared to the impossible life
and death drama of the show.

In a word, soap operas are
senseless, brainless, idiotic, simple,
shallow, imprudent, weak,
irrational, insane, ridiculous,
mindless, ludicrous, muddled,
absurd, half-witted, funny,
comic, silly, laughable,
nonsensical, illogical, indiscreet,
unintelligent, irresponsible,
scrutaneously, crack-brained,
added, drifting, awful,
uncontainable, misguided, wild,
injurious, inept, addled,
headed, insane, insane, mad,
crazy, moronic, touched, flaky,
comic, nauseatingly, incom-
herent, childish, silly, far-

fetched, preposterous, unreasonable,
senseless, insane, thoughtless,
careless, fatuous, light,
light-headed, belligerent, madcap,
giddy, cuckoo, benighted,
goofy, cracked, dumb, half-baked,
weary, hardened, dead,
cever, looey, batty, AND nutty.
And overall, just stupid, plain
ostupid.

Now, what kind of person
watches the soap operas?
Demographically most of America
does, but for our purposes we
concentrate on the University
Student. How can a student
(supposedly an intellectual)
lower himself to watch such a low form
of programming? Where does the
time come from? Hell, perhaps the
non-engineers do have the time,
but it would be better spent
watching Mister Rogers Neighborhood.
When asked why they devote their time
to the soap, students usually maintain
that "they're addicting." This
response seems strange, as
physiologically the human form
always abhors boredom and stupidity.

Solution? Yes! Stop! Stop
watching soap operas. Can you do
that just for a week, that's all
we ask. Burn your TV guides, put
your TV in the closet, and begin a
life free of the DUH of soap operas.
Working students of the University
might find. You have
nothing to lose but your chains.
Mr. Margolis argues that the Soviets have killed millions of their own citizens and do not care. No, the Communists are not interested in the welfare of the people, but in the welfare of the state. And this is why they have something at stake in the OSI cases. Many of the people being prosecuted are citizens of one independent country who illegally occupied by the Soviet Union. These people have not forgotten the injustice done to them in depopulating their land, the theft of their land, the forced displacement of their ethnic communities, and the fostering of antipathy and the instilling of the youth of today not to forget their heritage. All of these things are a threat to the Soviet state. If they prevent them from preserving the memory of their free land in the minds of people. What better way to eliminate this threat than to make the use of the community members in the eyes of US citizens. This is easily accomplished by branding a person as a Soviet war criminal. These accused criminals are the perfect scapegoats. It was they, who, during World War II, the leaders of small, but independent, nations. It is incredibly easy for Soviet agents to fabricate documents showing that these people were killers. In fact, defected KGB agents have testified that this is often better done with the sole purpose of discrediting community leaders. One must ask, are the accused actually guilty of war crimes, or are they simply being used by the Soviet Union?

As an American citizen, I find it unacceptable that our government is using its full force to keep the citizens of this country from speaking out. It is not acceptable for the government to use its power in this way. It is not acceptable for the government to use its power to silence dissent.

I am writing to make you aware of an issue that has been brought to my attention. This issue is the treatment of Soviet dissidents by the United States government. The government is using its power to silence dissent in order to maintain control over the Soviet Union. This is unacceptable.

I urge you to take action and demand that the government cease its persecution of Soviet dissidents. I urge you to support the following bill:

Subject: Support the Soviet Dissidents Act

Dear [Representative/Senator],

I am writing to you to express my concern about the treatment of Soviet dissidents by the United States government. The government is using its power to silence dissent in order to maintain control over the Soviet Union. This is unacceptable.

I urge you to take action and demand that the government cease its persecution of Soviet dissidents. I urge you to support the following bill:

Subject: Support the Soviet Dissidents Act

Thank you for your attention to this matter.

Sincerely,

[Your Name]
Ubman: How deadly my VAX

It was past midnight at IIT on what was probably the most storm-filled night of the year. The wind howled savagely down the fire lanes, sweeping everything from its path. Lightning ripped through the sky, leaving the grim stretch of ozone to mark its passing. The storm lasted all the way into the IIT campus like a whisper, tearing great chunks of it away with its fury. All the buildings were dark, and all right-minded people were gone from sight, safe from the rage of the storm. Nothing waited the IIT campus that night.

Nothing human, that is.

If anyone had been near 3rd street, they might have stopped next to Stuart Building to escape from the wind and the chill. They would have been surprised to hear the sound of chanting coming from the basement. Noise from the cellar of Stuart normally consists only of the hum of conditioned motors and the clacking conversation of printers. Computers don’t chant, and chanting doesn’t fit into the cold antiseptic circuits that so many students devote their entire lives to.

Ubman the mighty, that斯坦 EH dieter of IIT and its denizens, was, in fact, near Stuart on that fateful night. He had fallen asleep on a bench in Morton Park several hours earlier. So deep was his slumber that he did not awake when the storm began. He slept on, unaffected by the wind and fury. His senses challenging the very thunder. Only when lightning fried the bench he was on did the powerful Ubman wake up and realize the situation he was in. He was wet, he was cold, and the lightning had set his hair on fire.

After没什么 the fire with bits hands, Ubman decided to seek shelter. His first choice was the HUB. Surely he could rest there, drink a few beers, and try to sort out the snappy simmering mess on his head. But things did not go that way. It was after midnight and the HUB was closed. After trying (and failing) to convince a night manager to open a door and let him in, Ubman’s waterlogged brain searched for an exit from the basement. He remembered that Stuart Building was open at night, so he walked. The paper Weekly CS majors would have a place to spend their caffeine-filled nights. With a glimmer of hope, the most powerful man on the IIT campus took off at a fast trot for the north end of the building.

When he arrived at Stuart he was pulsing at the back of lights in the building. Then he saw a glimmer of light from the basement, and his powerful ears heard the sound of human voices singing. Of course, his soggy mind thought, they’re all in the basement

By Phillip Quarll and Ret Marut

NOT YET CHOSEN

where the computers are. By cutting the upstairs lights off, they are trying to save money for the school. For a person with as much faith in human spirit as Ubman, thoughts like these happened all the time.

The door was stuck. By now Ubman was up fed with the storm and very determined, it took only one powerful pull to gain entry. Once inside, Ubman took a moment to squeeze some of the rain from his soaking leotard. He entered a bathroom on the first floor, but there was now no paper towels. When he tried to start one of the hand dryers, all he received was a show of sparks and smoke. Ubman thought briefly about searching the ladies room for a month to dry himself, but rejected such an idea as being morally unsound.

As he stood in the bathroom, coughing mightily from the smoke that poured out of the hand dryer, Ubman remembered the voices in the basement. Perhaps one of the students would have a towel, he thought. At least he could dry himself with computer paper. At any rate, anything would be better than freezing in a cold, filth-strewn bathroom after midnight at IIT.

As he started down the stairs, Ubman again heard the sound of chanting. It was strange, he thought, that a chorus would be practicing so late at night. The song was hardly top 40. It sounded more like a Gregorian chant, perhaps as a drags. Ubman also found it strange that he could not understand the language they were using. The voices seemed to come from 42 languages and dialects, including those used by Bridgeporters and higher mollusks. Some words were familiar, but all in all it sounded like gibberish.

Ubman made his way toward the strange glow. As he reached the door he was stopped dead in his tracks by the sudden sound of someone laughing coming from the room. There was a moment of silence, and then the laughter joined by an unfamiliar voice. From the sound of things, they were not laughing about tuition bills, but something far more deadly.

Despite his tendency to rush blithely into the jaws of danger, Ubman waited. Fourteen times a day, Ubman hesitated. Things might not be as easy as they seem, he thought, heading closer to the door. One of his eyes looked at the flicker in the paper that covered the door, so he pressed in, squinting slightly in the green light. Ubman was not easily surprised by strange and unusual things. He had learned to expect the unexpected as a matter of course. Still, unexpected might not describe what he then saw in the basement of Stuart Building, room 017. Bizarre might be a better word.

There were thirteen people in the room, all but one sitting in a circle. The only light in the room came from twenty or more computer terminals, turned on and facing the group. The light made the garments worn by the group appear green, but it was obvious to Ubman that they were dressed entirely in computer paper, stapled together to form robes. Their faces were hidden by hoods. In the center of the circle, a single man and a VT100 terminal. The man was a paper man, too, like the others, but his hoods were made entirely out of Flappy disks. His arms were lifted, without a gesture. As Ubman watched, the figure began to speak in English:

"Hey mister, Mr. Logical One," chanting the man, whom Ubman decided was a priests of some sort. "How the crud are you people of Your followers here in Input Output." "HAUL-PIETYPYPH!!!" Ubman thought. How strange it was to hear such a thing. They were chanting VAX and it as if it was some sort of god.

"The priests and the followers of your system! Great and Usul! Give Your Blessing to those who serve You, the divinities. For Thine is the Keyboard, and the Paper, and the Glory, forever and ever. As the name of your prophet, Hugten, give us a sight!"

The name of Hayden Hugten, 1,646, cried the crowd.

The mood of the room suddenly changed,每个人s eyes glazed more brightly, filling the room with hushed light. Computer paper flew out of each other on its own accord. The air seemed to crackle with electricity. Suddenly, off to the side, a printer flew into violent action, clicking black words onto white paper. The white void froze as soon as the printer began, their faces twisted with religious ecstasy. In the light, Ubman saw that many of them had radiation burns on their faces from electric shock over a hot terminal for days at a time. Those were the hardcore users, he realized, the junkies with serious habits. What foolish plot indeed! Re-appear next week to find out the thrilling conclusion.

Peace Corps visits IIT
by Linda Parsons

The Peace Corps normally goes to far-away places, but this week they're coming to IIT. And they want you to think about joining them. The Peace Corps is especially in need of skilled graduates from technical disciplines in the sciences.

According to volunteer Barbara Bohonick, who recently returned from two years in Ecuador and is currently recruiting for the Peace Corps, "The volunteer must be people-oriented and adventurous because you must learn the language, customs, and live as they do. You must have a desire to serve others, to help people help themselves. The average age of Peace Corps volunteers is 30. Volunteers serve for two years and afterwards receive a lump sum of $4,500. During their stay all expenses are paid.

Host countries have asked especially for volunteers with a skill which usually means a college degree or several years of work experience. There are hundreds of jobs available in the Peace Corps. For example, engineers may work in constructing roads, water and sanitation systems, developing irrigation systems, or teaching.

"IIT's got many fields well especially interested in, particularly for those with science skills, such as civil engineering," says Bohonick.

Peace Corps representatives will be coming to IIT to recruit volunteers. There will be a seminar and interviews for those who wish to learn more about the Peace Corps. The seminar will be on November 1st, 3-5 p.m. in room 301, Herman Hall. Interviews will be on November 2nd at the Placement Office.

During Bohonick's stay in Ecuador, she worked with women and children on improving health, nutrition, and handicrafts. She explains that her village "had a one-room school house, a church, and a store. There was no electricity or running water.

Every week she met with the Ministry of Agriculture to discuss progress and materials that were needed. There is also a Peace Corps office which is directly involved and takes care of the needs of volunteers. Bohonick also kept in touch with seven Peace Corps volunteers who lived in neighboring villages. She says they would get together to compare notes and party.

Wallace Geode, who was Student Activities Director at IIT, is currently a Peace Corps volunteer in Western Samoa. He is working on the development of community services.

The Peace Corps is an agency of the U.S. Government that provides technical assistance to developing countries. The Peace Corps is the only U.S. agency that places its people in the villages of developing nations to work and live with the people they're helping.

President John Kennedy established the Peace Corps in 1961. Its goal is to provide assistance and to help develop good relations with participating countries. Also, the Peace Corps promotes the understanding of Americans abroad and greater knowledge of developing countries here at home.

NROTC observes Navy birthday

Last Thursday, the Naval Reserve Officer Training Corps celebrated the 200th birthday of the US Navy and the 210th birthday of the US Marine Corps. The event was commemorated with a traditional parade and cake cutting ceremony.

The parade, which was held in Kenil Hall, was commanded by Midn 1/c Larry Schwartz, the Midshipmen Company Commander. Capt. Jerome L. Martin, the Commanding Officer of the NROTC unit, was the reviewing officer along with Capt. Arthur Buss, the Director of Training for Reserve Engineering Duty programs.

No birthday celebration would be complete without a cake. The cake was brought onto the parade deck to the tune of "Anchors Aweigh." Traditionally, the youngest and oldest members of the command cut the first two pieces of cake. Midn 1/c Harry A. Millenbach 1f; was the youngest midshipman and Midn 2/c Michael Holderman was the oldest.

Following the formal ceremony, a reception was held so that all of the midshipmen could celebrate the occasion.

This was just one of the many events in which the NROTC unit participates. Each Thursday the Midshipman Company provides a Color Guard to render the National Ensign, just south of the Union Building.

The midshipmen also participate in intramural sports here at IIT. The midshipman intramural football team, the Seahawks, have recently captured the intramural football title.

In addition to events here on campus, the midshipmen compete in many intercollegiate competitions including track with their football team.

Midshipmen on scholarship get to spend part of their summer on board naval ships located in various ports around the world. Last summer, IIT midshipmen visited Australia, the Philippines, Japan, Korea, Hawaii, Panama, the Caribbean, and many other places.

The NROTC program is open to all interested freshmen and sophomore students at IIT. For further information, contact any midshipman, or call the unit at 2-1557.
Spoken Here

In order to accommodate your every whim and fancy, we of the Union Board need to know how you feel about our events and programs. The questionnaire below will give Union Board, your humble servants, a chance to serve you better! Please return the questionnaire to the Director's Office.

(1) What kind of events would you like to see Union Board do?

(2) Do you like the events Union Board does now?

(3) Do you have any suggestions as to how to improve them?

Rank the following from 1 to 10:

UB Films
UB Bog Concerts
UB Focus on the Arts
UB Boat Trip

List the top ten groups you would like to see put on a Major Concert on IIT's campus.

Ernst

continued from page 1

The president with the resolution according to Ernst is that it "fit no way addressed, work which the Senate took force under the leadership of Mr. Biechemachi in its proposing for the 84-85 and 85-86 budgets. It is as if the majority of the board members never saw our proposals but only the aspects which the president wanted to push.

Biechemachi, Chairman of City and Regional Planning, thought that the resolution was "a very positive but timid first step." The problem with the response according to him is that the Board is only looking at the instructional budget while there are a lot of other areas of the institution that could be tightened up.

The resolution is a response to the plans and ideas presented to the IIT Board of Trustees a week ago during a private meeting with Robert Gilvin, Gilvin, Chairman of the Board, met with Dr. Ernst, Mr. Biechemachi and Dr. Saxena on October 18. (See accompanying article.) Gilvin then presented the ideas on the full Board of Trustees on October 19.

A brief meeting of the Executive Committee (called a "ump" meeting by President Martin) followed the Board meeting. However the actual resolution is a synthesis prepared by Vice-President Arch McClure from written statements by Martin and Gilvin and from personal visits with all Executive Committee members who had attended the October 10th Board meeting. The final form of the resolution was either sent to Executive Committee members, or read over the telephone and approval given.

There are positive aspects of the response, according to Ernst. "We are diametrically opposed to (Martin's) version of what the university ought to do. But the board accepted the idea that there would be faculty participation."

Ernst complained that President Martin "is already starting to circumvent the work of the University Faculty Planning Committee, and that worries us." He pointed out that the president seems to be choosing to have faculty participation in some discussions and problem solving but not in others.

"We will regard the resolution of the board as meaning that the faculty will be participating in the planning (of the university) in the future," Ernst said. "The faculty will not be open to working only on certain restricted problems."

The response of the full faculty will not be known for some time. By this early date perhaps Dr. Ernst summed it up best when he said "We're not through yet. We'll try again."

continued from page 2

Executive Committee Resolution

At the October 19, 1984 meeting of the IIT Board of Trustees, President Martin described the recent organization of faculty committee structures which will encourage and facilitate fuller faculty participation with the administration and, through the Boards of Overseers, with the Trustees in the future planning of university activities. The Board endorses these actions as important steps in increasing the maturity and effectiveness of the institutional governance structure. The President also explained the commitment of the faculty and the deans to direct reduced instructional costs in the 1985-86 budget by $925,000 and to maintain balanced budgetary operations in subsequent years. The Board was pleased to learn of these commitments.

President Martin explained that it was because that the faculty and the deans would stand behind these commitments and, as a result, he recommended the withdrawal of the Board approved policy and procedure for faculty reduction (Appendices A and B) of August 23, 1984. The Board approved the withdrawal of these policies.

The Board expressed concern that the plans for the $925,000 reduction in the 1985-86 budget proposed by the Senate Coordination Committee were incomplete, unspecified and failed to address the fundamental issue of flexibility in faculty resource allocations. However, the Board noted that the cost reduction measures currently under review would be useful in the short term to secure additional time to produce complete and specific plans for 1985-86 and to develop policies and procedures to deal with the underlying problem of faculty staffing needs for shifting enrollment patterns.

The Board unanimously expressed confidence in President Martin and his administration and in its ability, with faculty participation, to develop solutions to these problems.

The Executive Committee therefore directs the President to oversee the completion of a statement of policy and procedure to deal with faculty staffing requirements in times of changing enrollments, specifically addressing the policy and process to be used in faculty reductions needed for program reductions. A final report is to be presented on March 15, 1985, with periodic, interim progress reports.

Additionally, by March 15, 1985, the President is directed to submit to the Executive Committee final, specific and complete plans for the $925,000 reduction in direct instructional costs in the 1985-86 budget. The plan is further directed to present, on the same date, a long-term (multi-year) financial plan.

The Board expresses its appreciation for the constructive efforts of the administration, the deans and the faculty to work through these difficult times. For our part as Trustees, we acknowledge our responsibility to participate in the solution of these matters including our continuing efforts to enhance the resources of the university.
Jim and Joe revealed
by Justina Smelt

What’s all the talk about Joe Gatton and Jim Trione? Why do they appear together in print as the authors of a joint column in Tech News? More important, can they be serious?

It may seem like interesting for a news reporter to interview columnists from the same paper. But currently the columnists of Tech News are news. Gatton and Trione were interviewed and say they are serious... to a point.

Asked if they were serious about the articles they’ve written, Gatton’s response was “the articles speak for themselves. We’re just two people writing about issues of campus life, having some fun.” Commenting on the column “Two Males Salute Miss IIT of the Lunch Hour”, Gatton said, “The Miss IIT article is an exaggeration of what happens.” But who is she? “Whichever you think she is, or maybe not. I don’t want to tell you.”

It appears that these two like to get others upset. Gatton confirms this saying “It’s fun to rub people on the nose.”

 Mentioning the article on ‘Negative GPA’ and the message behind the last sentence “A great woman (a contradiction in terms)”... Gatton said he feels that men are superior to women. The basis on which he says this is “It’s just an obvious fact.” Joe loves his mother, but he doesn’t feel as if he’s superior to her. Is this a contradiction?

Just in case you want to know, Joe Gatton is 19 years old. He is a sophomore majoring in mechanical engineering. He has two older sisters and he’s from McHenry, Illinois where he attended the district public school.

Gatton received a four-year scholarship from IIT and chose IIT as his school. He likes the man and the reputation of the school. You may also be interested in Jim Trione. Trione is 19 years old, a sophomore majoring in electrical engineering. He hails from Belleville, Illinois which is a suburb of St. Louis, about 200 miles from here.

Trione received a full Air Force ROTC scholarship to the school of his choice. Why IIT? Trione had to attend a good school with a good reputation.

Trione has a younger brother at home and he attended Champlain College Preparatory. The school’s motto is “Elan IV” in Latin, and means “be a man.”

If you have read the October 22 issue of Tech News on Page 4, “Save The Campus - Kill a Commuter” don’t be offended commuters. These two are speaking from experience. For example, Jim’s former school was a private Catholic, all male school where he was a commuter student. He really wanted to be a resident student there because as he says, “I was a day student for four years and I missed out on many activities and the university evenings. Being a commuter student I had to go home. Shouldn’t you have more sympathy since you’ve experienced communting? “My concept of a university is a community which is brought about by people living on campus.” We don’t want a dry commentary for a comic strip, nor do we want our writings to be a diary. We want the campus experience we write about to be enjoyed.” Jim and Joe are involved in extracurricular activities.

This is the fourth article they’ve written. They were asked if they’ll continue to write until they graduate and the response was “We don’t know, as it stands now we’ll continue to write.”

Peace Corp
continued from page 7

The overriding objective in these developing countries is to survive today’s problems and to become self-sustaining tomorrow. Peace Corps tasks are designed to help the people of the country directly. For example, a village may need an irrigation system for farming, so a Peace Corps volunteer will be sent to help construct it. The volunteer and the villagers build the system, and in the process the villagers will learn the technology for themselves.

ENGINEERS
V-ball takes first

by Natasha Richardson

The IIT Women's Volleyball team had a fantastic showing at the Rockford "Lady Regents" Invitational October 20th. For the second game in a row they pulled together after shaky preliminary matches to take first place.

The first game was a loss to Beloit College with scores of 16-14, 17-9, and 15-11. Against Rockford College in the second game, they swept an easy victory in two matches, 15-6 and 15-9. In the third game, IIT was defeated by Eureka College 15-11, 5-15, 10-15. The Scarlet Hawks beat Judson in the final preliminary game 15-3, 15-8.

In the semifinals, IIT again defeated Judson College 15-5, 15-8. This was the fifth time IIT has beaten Judson in this year which is the most times the Hawks have defeated the same team in one season.

The final match was a close battle with Eureka College. The scores were 16-15, 15-3, and 15-12. The volleyball team has won three of the four tournaments.

Coach Meyer feels that this was a big accomplishment, but the goal for next year is to win all four. Jennifer Gilks, sophomore, was named most valuable player in the Rockford tournament for the second year in a row.

Last Tuesday the Hawks placed an important conference match against Chicago State. IIT was tied with CSU in the conference standings which made Tuesday's match a crucial one. With a large home crowd to cheer them on, IIT fought through five matches to gain a victory. The scores were 15-9, 15-3, 15-13, 15-10, and 15-12.

In the fourth game Chicago State had to win in order to win the entire match. IIT was down 5-9 when Kim Murphy, sophomore, entered the game. She served six consecutive points to bring the Hawks to 11-9 lead. This major turning point gave the momentum needed to dominate the rest of the match.

All of the players exhibited good serve reception, and a few players' performances were prominent. Mary Kough had 18 unreturnable spikes. Jennifer Gilks, who normally goes to the setter's position, had 14 unreturnable spikes, as did Ruth Zelenak.

Saturday, October 27th were the conference playoffs. Results from those games will be printed in next week's issue of Technology News.

Monday the Scarlet Hawks will take on Mundelein college in an away match at 7:30. Tuesday night IIT will host Aurora College in东亚 Hall at 7:30.

The final home match is Thursday, November 1st against Trinity College. This will be Parent's and Fan's Appreciation Night. A reception will be held following the game.

Scheck to sponsor intramural B-ball

Scheck razor company will be sponsoring a national intramural 3 on 3 basketball tournament. It is open to all students. Teams from the participating Chicago colleges will compete and the winners and first runners up will receive free gym bags. Scheck is also donating free razor/razor kits for all participants. The winning team in the Chicago area will be honored at a Chicago Bulls game. Details will soon be announced.

**IT's soccer team makes history**

The IIT soccer team rewrote history last Wednesday October 24th, defeating the University of Chicago 1-0 and compiling a fine 6-3-3 record. This is the best record achieved by any IIT soccer team since soccer was initiated as a varsity sport 11 years ago. In the game against the University of Chicago, the Scarlet Hawks walked onto the pitch with authority and inspiring determination and wouldn't yield to the opponent until their record-shattering victory was accomplished.

Clearly, the "force" was with them. In their quest for victory, IIT also lived up to the image of their team nickname, the Scarlet Hawks, drawing for every ball, pouring on bewildered University of Chicago players and soaring through the air for every headball.

As the whistle blew to start the first 45 minutes of play, IIT enthusiastically retreated to a defensive shell and denied UOC of any easy goal-scoring opportunities. However, as the first half progressed, the Hawks, with their keen creativity and knowledge of the game, triedgap gobbling holes in their opponents' defense and began to control the midfield. By the end of the half, IIT was solidly dominating the game but still had no points on the scoreboard. During the half-time, IIT's sideline had the atmosphere of a champion. Each player listened attentively as coach, Rich Eay, related IIT's slight weaknesses on both offense and defense and suggested ways to finish off UOC team members, with this intelligence, cleverly devised new plays for the next half and corrected any miscommunication which may have occurred in the first half. As the team huddled to shoot off a final epitaph, each and every player was parched beyond human comprehension. Knowing that the Hawks would prevail.

The second half was the beginning of the end for UOC as IIT exploded onto the field and took control of the entire 45 minutes of play. The Hawks' passes were crisp and concise and out through UOC's defense like butter. Midfielder Johnhiearing appointed, and stopper Montexis Giotis made swiss cheese out of UOC's defense on several occasions, passing their way to the goal, but were unable to connect for goals. The Hawks also had good chances created by midfielder Javitzle Juron, who kicked numerous deadly corner kicks which unfortunately did not score. However, it seems that the more opportunities IIT missed, the more determination the Hawks had to control the ball and try again. This unwillingness to give up was exemplified through the efforts of forward Mike Grushchuk, who bastioned the entire game and while going up for a head ball literally jumped over a standing six-foot defender Halibucks (Steve Lewis and Issam Jabbari), who were invaluable in securing the midfield after the injury of Steve Arzak.

With about ten minutes left, midfielder Johnny Bruno put the game in iced, scoring 99 all by Nick Grushchuk. This assist has tied brothers Mike and Nick Grushchuk for total points in goals and assists. Each has 15 points.

After this goal was scored, IIT's defense took over and denied UOC of any chance to score as they had done in the early part of the game. Fullbacks Trino Romero and John Tallarico contained the opposing wingers, stopper Montexis Giotis; and sweeper Jim McNulty cleared the center, and goalie Horst Stagi made brilliant saves whatever needed. As the whistle blew to end the game, there were shouts of joy as well as feelings of remorse. Another season with history, but history was made.
Get the jump with The Long Distance Winner.

Davey Crockett got the jump on the competition by leaping farther than any other frog—20 feet 3 inches at the annual Calaveras Jumping Jubilee at Angels Camp in California in May 1976.

AT&T gets the jump on the competition, too, so you'll get more mileage for your money. You'll save 40% evenings—60% nights and weekends—plus service that's leap years ahead.
