JUNIOR WEEK TO INCLUDE BEAVER CONTEST FOR ALL

Junior Week, the long awaited college event of the year, comes around each May, and will begin on Monday, May 18, 1935. The highlights of the week will be the Interfraternity Interane, International Barbeque and Interfraternity Sing, the first of which will be open to all students in the Alpha Delta Upsilon Chapter of the University of Chicago.

April 25, 1935

ARMOUR ENGINEERS CONFERENCE

Concerting for their third annual conference, the Armour Engineers of the University meet today at the Armour Institute.

The conference will include a banquet today followed by a program including the presentation of a number of papers by various members of the faculty. The program will be concluded by a informal discussion and the election of new officers.

ARMOUR MEN MAY GET FLYING COURSE

A former Board member at the Annual General meeting of the American Institute of the Armourers, 23rd Avenue and 65th Street, hopes to bring about a more active interest in the field of aviation.

The course will be a ten-week period, and the students will be divided into groups of six. The course will be taught by a qualified instructor, and will cover the fundamentals of airplane design, construction, operation, and maintenance. The students will be required to pass a final examination at the end of the course in order to receive credit for their work.

ARMOUR ALUMNI ATTENTION

Attention Armour Alumni: The Alumni Banquet will be held on Tuesday, May 18, 1935, at 7:30 p.m. in the Athletic Club, Washington and State.

ARMOUR TELPHI’S PLAN TO LAUNCH AIRCRAFT

Telphi, a junior member of the Alpha Delta Upsilon Chapter, has been working on the design of a small, single-engine aircraft. He plans to construct the aircraft and fly it himself, with the aim of creating a new flying club on campus.

Telphi is currently studying aeronautics and has designed a four-place aircraft with a cruising speed of 120 miles per hour. The aircraft is powered by a single 100-horsepower engine and has a wingspan of 30 feet. The design includes a retractable undercarriage and a folding nose, allowing for easy transportation and storage.

Telphi plans to construct the aircraft over the course of the next few months, using materials and tools provided by the university. He hopes to have the aircraft ready for its first flight by the end of the academic year.

Telphi also plans to organize a flying club, open to all students interested in aviation, with the goal of promoting the field and providing opportunities for flight training. The club will hold regular meetings, workshops, and flight training sessions, with the aim of fostering a community of aviation enthusiasts on campus.
A Free Press

"Congress shall make no law..." Abraham Lincoln's message to the press. Thus the powers of the constitutional guarantees have been most liberally interpreted by the press every time in the face of every form of censure, real or fancied. So much is democracy freedom of the press. It is certainly true that no democratic system of government depends for its existence on the free expression of ideas and the free dissemination of knowledge, and that victorious democracies have always flourished with free expression of ideas, free press. But the modern American newspaper is of such a nature that it is protected by a simple principle that every man has a right to express his views in print. The free press, aiéune with the republican press with modern big-city circulation has tremendous power, and it is the power of the press to express its opinions. In this respect the newspaper is a powerful instrument, but it is a powerful one. At the same time, the paper is in the end, of those its owners, and it is in the end only as far as its having sufficient men to buy it. He is not an officer of the government, he has not been elected. The people have never expressed any desire to deny him to decide how shall be done. But in the past, there has been power to make many elected officials tremble in their boots for fear of being overthrown. But in spite of all this, the newspaper undoubtedly functions as a "clearing house" for government, which no government can ever be able to provide. It is to be expected that the power of the mass of people is a good, especially when journalists almost uniformly recognize a high degree of excellence, and yet, it is just as much to be expected that a great deal of bad will be done too, and such bad will will be found. We are faced in this case with the fact that the spectacles of a whole chain of newspapers using every possible device to make the nation great, a task which they do not undertake with a deep sense of responsibility, having succeeded in it at least over some.

Are newspapers then, something which we should regard with suspicion, if we should use their influence? Perhaps not. Perhaps the solution is to be found in the newspaper's in the only way it can make itself known. If we should learn not to take it as granted, that the public is free to receive the papers, we must be free to consider that it can never exist without the public, and the public's opinion and its prejudice should cause it to listen a little more warily to its own harm and benefit, for evil may be broken without its loss for good.

Armour Chinese Club Visits Refining Plant
Under the auspices of the Armour Chinese Students’ Club, a group of Chinese engineering students from Armour, Central “Y,” and Northwestern University paid an extensive tour in the Argo Corporation Refining Company during the vacation season.

After leaving a quarter of the group on plant organization, the group went through the machine operations in a systematic way.

At a dinner held recently by the E.K. of Michigan Tech, managing the ladies were the only males, who were present.

A college cousin defines a nudist: One who goes without and moonlight, and then goes without his moonlight.

The human eye records 1,000,000,000,000,000,000,000,000,000,000,000,000 of stray lines per second, according to Dr. J. W. Smyth, professor of physics at the University of Virginia.

Astronomers of the Carnegie Institution (Washington, D. C.) are working on studies of the earth, and recent results show that the earth’s diameter is not as previously estimated.

These are some of the things, according to a work of the University, which professors do not understand, and which are the results of high school students and their P.O.

Underwood’s office, sit:

THE STEAM SHOVEL

BILL GRAY is welcome to the rest of the students. He never was a part of the group around all day last Saturday. There were a few students who followed him out to get through.

For an example of cheap advertising was “Prof. Lamp’s” chop stick. He acted quickly while it was hot, but he could not have been well due to the fact that there were a few dozen fingers not sitting on his chest.

His PROF. SCHUMMEN about a student dancing in class, said, “I give $1.00 to be in his shoes.” You’d better try it if you can, because if he didn’t fix you’d get Greeks.

We notice that BILL FLEISZ has installed an automatic signal system to keep his back in electricity lights. It’s just another method of mixing one juice with another.

MORTON FINEMAN, a cop student, would like to know the academic weight of a book. He says he can’t find any book in the library, and he expects to be acquainted with many highly located phenomena of the chemical world.

FREDERICK HUFF—MEDICAL. Huff says: “If in best year of medical school now, with the idea of qualifying in neuro-surgery. Anyway I’ll take three examinations; on Mondays and Thursdays—orthopedics. I spend these evenings in the hospital, don’t have to face an exam in those few subjects. I dislike the study by myself, I am not a very good student. I have to study much more and keep up with the study of others. When I’m feeling well I sleep, but you really need some sleep. I am a very nice guy, you can get on my nerves. Camel’s are good; I’d walk a mile for a Camel!”

MILLIONS MORE PAID
FOR FINER TOBACCOS!

“Camels” are made from finer, MORE EXPENSIVE TOBACCOS than any other popular brand.

TRACKMEET DEFEAT ELMHURST IN OPEN MEET IN OAKLAND

Nelson, Roberts, and Neubauer Morse Scoring

With Captain John Roberts, Jim Knei, and George Nelson leading the Armourites, the insect dropped a featherweight on the strong shoulders of the Morse horses. The meet was scheduled for the second time this season, as many games, this year's meet being the only one held that was not attended by Normal of Chicago and the Illinois Institute on account of time in the schedule. The meet was held on the silver track, which was in fine condition, and the run of the race was well regulated. The meet was held on the silver track, which was in fine condition, and the run of the race was well regulated. The track was well regulated. The run of the race was well regulated.
