One of Our Own
By Elizabeth Bilitz
TECHNEWS WRITER

Last semester, as students were getting ready to leave IIT for the summer, an admission counselor's friend victim to a life-ending crime. Jenny Wanner, an IIT employee for one-and-a-half years, was walking home from the bus stop on May 10 when a 17-year-old male assaulted her from behind. Apparently after her purse, the man used the straps to strangle Wanner. The police found her purse, the man used the straps to strangle Wanner. The police found her

State Street Village: Open For Residence?
By Gabriel Carhill
BUSINESS MANAGER

With enrollment once again climbing over the past years and the MSV’s housing accommodations and amenities long out of date, Illinois Tech had to change something and make a statement about the universities commitment to the students and the campus. Enter the State Street Village. The SSV, a shiny 5 stories of steel, glass, and reinforced concrete is Illinois Tech’s first new addition to the campus since the golden years of Bronzeville and has already been judged by the local populace (no I don’t mean the former denizens of Stateway Gardens). While the SSV may have won its race with the MTCC to be the first new building open, it has done so at a cost.

Students who have moved into the SSV after living in the MSV find it a sharp contrast. From the custom designed furni- ture that adorns it, to the new suite style layout, to the inclusion of the wireless network, the SSV even has enough outlets to plug all electronic devices in and not create an overload on the circuit. While the amenities and the privacy of the new suites and apartments in the SSV have attracted both new and returning students of the Illinois Tech community, the buildings are not quite the success that the university had anticipated. With an overall occupancy of only about 60 percent, the SSV is barely over the halfway mark. Many of the floors still have the feeling of a ghost town with only a few people residing on them. This is due in large part to the difference in price between staying in the MSV, which is at almost full capacity, and the SSV.
New School Year, Same School Problems
Princeton Review Rankings Show IIT in Bad Light

By Richard Duncan
MANAGING EDITOR

The smallest and most un-
sightly campus. The long-est
lines and the longest red tape to re-ac-
quisition. The fourth unhap-
piest student body and fifth worst
campus food service.

You guessed it. The annual
Princeton Review rankings are
out, and once again, Illinois
Institu-
t
T
tu of Technology ranks near the
top of every “bad” category ac-
cording to student surveys. Of
351 colleges ranked, Illinois
Tech hits the top 10 in seven of the
ten “bad” categories, and in the
top 20 in the other three. It really
makes you wonder why people
keep coming here, even in rela-
non numbers.

You chose this school. I
 chose this school. Sure the allure
of a free education brought many of
us (admittedly, yours truly con-
sidered this the only and only thing
needed to accept enrollment here),
but everyone is not on a schol-
arship. According to the Princeton
Review, only 54% of our under-
graduates receive need-based
financial aid, and while some get
merit-based aid, our financial aid
ranking is only 82. Dozens of
state-sponsored schools in our re-
spective home areas are tens of
thousands of dollars cheaper than
our school did not win itself many fans.

So we come back to the origi-
nal question. Why do people keep
coming here? Why did we come
here? Could it be that all these
problems, so obvious and visible
to us now hidden from view by a
clever and cunning admissions
and housing staff? While I do not
want to suggest there is a lack of
clever or cunning in any of our ad-
ministration, as they are very ca-
matical. To convince ourselves that
Illinois Tech was free of the problems
we now face daily? No one may ever be able
to successfully answer that question.

But since this is my rant, I’ll offer
my views of quite simply. Actually,
we only what we want to
believe. We only feel, see, or
do what we want to feel, see, or
do. We all want Illinois Tech to
be a great school. We want to be
able to look on our school with
pride, not only so that our own
positions in the future will be
amplified by having gone to a
teresting institution, but for
deeper reasons.

One thing I’ve learned over
the past two years is that Illinois
Tech has a distinct affinity for
drawing together students from all
over the world, from all walks of
life, and from practically every
possible socio-economic, ethnic,
and geographic group you can
imagine. Our enrollment is one of the
only things which binds us in
common. But there is at least one
more thing which holds us to-
gether. Without exception, we all
are able to see beyond what is to
what can be. It is a key require-
ment of our careers, whether engi-
neer, architect, doctor, or lawyer.
So in the beginning, we all
saw something here, something
special. Not what is here now, or
there then, but what could be here
in the future.

Although that sounds a little
cooler and maybe a little too ab-
tract, I’m trying to make a point.
The campus may be full of prob-
lems, but it’s not problems that
make for a poor institution.
Poor institutions are those which
fail to identify their problems, but
are those which do not act on those
problems, to rectify them
for current and future students to
benefit. We all may see the prob-
lems now, but at one point, some-
where, some time, we also saw how
to solve these problems.

They aren’t solved by com-
plaining or shuffling, or giving
up on those in power before they
are tested. Change happens when
one person, one student,
stands up and says “Enough.”
The problems are over when the
solutions. All it takes is a little
perseverance, a little determina-
tion. Things in life have an inher-
ent quality of always being able
to change. Just change can get bet-
ner. Problems can be solved, but
nothing will ever be solved by a
school body looking at a survey
and collectively laughing, “Yep,
that’s it.”

REAL FEEDBACK. SEND COMMENTS

By Jasmeen Bains
TECHNEWS WRITER

August 17 was a very hot day
indeed! Who would have
known Chicago could get so
hot? But despite the heat and the un-
controllable humidity, people all
around the campus greeted each other
with big bright smiles, al-
most as bright as the sun!

“Orientation Week started with the initial feeling that we
were going to be treated like a bunch of 5-year-olds.

It started out with the initial feeling that we were
to be treated like a bunch of 5-year-olds, but it was a lot
more helpful than I thought.”

Oksana Losawsky

“I was a little child at first, with the orientation group
meetings and the play fair, but not for long. The most
helpful thing given out, by far, was the Guidebook.

The best part about the setup
was that there were innumerable ac-
tivities and something that could fit
everyone’s taste. Whether it was
the snowball fight or the scavenger
hunt, everybody couldfind and have a
great time. Freshman Mirela Zedelski
com-
ments “Orientation week was a lot of
fun. It kept us busy so we wouldn’t
have a chance to miss home that much.”

Freshmen were amazed at Orientation
Week and loved the fact that older stu-
dents taught to them to
the new, which is going to help them
get adjusted into their new
environment. “We have to really ap-
preciate the hard work and effort put
in by all the seniors,” says one of
the freshmen.

I was very impressed with the
derived that something changed. The
first, with the orientation group meet-
ing Week did seem a little childish at
first, with the orientation group meet-
ing. But this brings a very impor-
tant point. We knew what we were
getting into when we came here.

The most helpful thing given out, by
the past two years is that Illinois
Tech has a distinct affinity for
drawing together students from all
over the world, from all walks of
life, and from practically every
possible socio-economic, ethnic,
and geographic group you can

Law and Order: Crime on the Rise at IIT
Public Safety Pounces on Case; Comes Out On Top

By Richard Duncan
Managing Editor

Public Safety received a call from the RA on-duty on May 28 regarding a loud crash heard near the Residence Life Office. Officers went to investigate and found that a brick had been thrown into the window of the office, and there were no eyewitnesses. Such an act would be hard to pin on any individual, but it could be easily handled by local public safety. Investigation is considered an almost too-scripted feel. But life does imitate art, and a "script" of criminal act and investigation was played out over the first part of the summer on campus.

According to Director of Public Safety Scott Soltos, the purpose of the investigation was for security, safety, privacy, and journalistic reasons the details of the events’ participants and methods of investigation are undisclosed. Executive Director of “Law & Order: IIT” shows how, well, how the various departments on campus work, almost always handled internally, with apologies, admissions, and community apologies, admissions, and community meted out to the guilty consisted of recognitions, apologies, admissions, and community service at St. James Food Pantry. Geiger said that incidents like these are almost always handled internally, with Soltos adding that unless felonious acts or personal injury results, the CPD is not involved as long as Public Safety can handle the investigation.

In regards to the swift action on everyone’s part during this incident, Soltos credited the increased communication and added that it was between his department and the rest of campus. He said that while measures taken in recent years did not directly affect the investigation, the level of communication that exists in the event of a major terrorist attack or other disaster certainly aided in find- ing the perpetrators. He also said that it should be stressed to all students and members of the IIT community that security and safety can greatly be helped by vigilance, both in protecting and keeping an eye on suspicious activity as well as making sure they keep their email and other electronic accounts safe and log out of them whenever they are finished using each terminal.

Students test out new Segways at IIT

Weekly Virus Report
By Jeffery Clark
Web Editor

O n August 18 a new virus was discovered that uses the same flaw in the Microsoft Windows operating systems that the now infamous MSBlaster (aka Blaster) worm was known for. Termined “Nachi,” the worm also attempts to use the Microsoft IIS WebDAV Remote Compromise Vulnerability. Nachi has a very interesting feature - it attempts to “disinfect” systems affected by the MSBlaster worm, as well as patch them against the RPC vulnerability that allows spreading. Although this virus may do some good work, it floods the network and internet with unnecessary and oftentimes annoying traffic. Once the date of the computer reaches January 1, 2004 the file will delete itself. This virus has been given a medium warning level and has the potential to destroy or corrupt your files. As always the best way to protect your PC is to apply the patches provided at Windows Update and to run virus scan software at least once a day.

Email Virus Debilitates Millions of Computers

By Mihdi Vahedi
TechNews Writer

T he recent outbreak of the SoBig F worm that hit millions of computers worldwide is a classic case of modern-day attack on society. Aptly called SoBig F, the worm has been the fastest spreading virus ever created. “F” signifies the version of the worm, which is sixth in a series of adaptations since it first hit com- puters in January of this year. Interestingly the SoBig F worm does not delete information on computer hard drives. It comes as an attachment that further forwards itself through email addresses found in the users address book. Many infected emails have subjects such as “Re: Thank You!” or “Re: Application” which make them appear as regular email. According to the legal system this is a crime, however many believe that in the long run this is a contribu- tion towards building a secure main- frame system. “I think a crime has been committed, but I don’t take it personally. In fact I would like to congratul- ate the programmer for bringing to light this security issue in his own feedback style. At least now I know that Win- dows is more secure than before,” said Mujtaba Ahmed a junior Molecular Biochemistry and Biophysics major. Each version of the worm has been substantially more powerful than the previous. “I don’t think this was the worst. It really was easy to get rid of,” affirmed Joe Nuzzo, a sophomore Music Education major at VanderCook College of Music. Signs of the virus include plentifulopup screens, which indicate that this worm may have been written for commercially spamming computers. The news of the worm spread fast throughout the world. “The worm did not affect me at all because I got the patch a few hours before the virus actually hit my computer,” said Muhamed Ali Siddiqui, a sophomore Mechanical and Aerospace major. These kinds of viruses also create tremendous amount of traffic on servers, which in turn slow down the Internet. The network at IIT was also af- fected to some extent although attacks have greatly reduced since last bombing. The worm has an expiry date marked September 10. Going by the fre- quently improved releases of the worm the worst is probably yet to come.

TECHNEWS WRITER

Welcome to America! I know only a handful of people have said it to you. I know this speaks from experience. What follows is a guide that you must read before you even set your hands on your student handbook. Consider the following in the words of a fellow international student who has been around for three years and feels that he knows a few things that you are still unaware of.

Paperwork: A violation of the conditions of one’s international student status can lead to consequences that are more irritating than hemorrhoids. Such consequences include being denied a reinstatement of student status and hope that you do not get deported. If you work off campus, make sure that you work off campus, make sure that the school and immigration authorities authorize you.

IIT Community: The Indians generally hang around for three years and feel that he knows a few things that you are still unaware of.

The Bottom Ten

By Aaron Collier & Jonathan Holley
TECHNEWS WRITERS

This week, Aaron and Jonathan went around campus asking people for opinions on the red and black stripping recently added around the top of the new campus center. Here are our bottom ten responses:

1. “It’s something new.” V.S.
2. “There’s some kind of meaning behind it.” S.V.
3. “I’m not sure exactly what it’s for. It might be for the safety of the trains.”
4. “The zebra?” C.C.
5. “It’s kinda ugly. I really like the orange stuff though.” E.M.
6. “It’s extremely ugly. It was ugly to start with and now it’s uglier!” S.H.
7. “What the hell is that? That looks like a *#%^ up!” T.F.
8. “It looks like blood dripping down.” J.C.
9. “I like it! Looks fake!” S.S.
10. “It’s awesome! I love it because it’s a complete joke!” C.P.

WE SAY:

Aaron: “I think it looks sexy!”
Jonathan: “I was getting tired of the orange.”

“arquitectos“ means “architects.” Although this organization was founded though this organization was founded though this organization was founded through architecture, art, or the Latin culture, Arquitectos has members from each club from each club from each club.

Arquitectos is a student organization open to anyone who has an interest in architecture, art, or the Latin culture. Arquitectos has members from each club from each club from each club.

Arquitectos welcomes all architecture students, it welcomes all architecture students, it welcomes all architecture students.

You don’t have to be an architect.

Arquitectos offers vast opportunities that lead them to excel both academically and professionally. For more information, check out the Arquitectos website at http://www.iit.edu/~arq.

Club Profile: Arquitectos

By Elisa Watanabe
SUBMISSION

You don’t have to be an architect.

Arquitectos is a student organization open to anyone who has an interest in the field of architecture.

In Spanish, “arquitectos” means “architects.” Although the organization is founded over a decade ago by a group of Latin American architecture students, it welcomes all students of any background to join.

Over the years, Arquitectos has come to welcome many non-Hispanic members.

The name may also mislead people into believing it is only open to architecture students. But that is not the case.

The organization is affiliated with two other chapters of Arquitectos: the UIC Student Chapter, as well as the Professional Chapter.

The Professional Chapter is composed of practicing architects and engineers who have graduated from IIT or UIC. They serve as mentors for the subsequential and offer to conduct resume workshops, critiques, site visits, etc. This is a great networking experience for students. Through the efforts of these organizations, the members are able to enjoy a broad range of benefits that lead them to excel both academically and professionally.

A few things Arquitectos has to offer are: mentorships, scholarship opportunities, portfolio/resume workshops, AutoCAD workshops, lectures, annual exhibits and architectural tours/trips.

Arquitectos fosters the development of professionals by providing exposure to architecture and art as a discipline. From the Annual Art Exhibit, which showcases student talent at IIT, to the Arquitectos mentoring program, Arquitectos offers vast opportunities to its members. The organization also encourages and participates in community service.

Arquitectos presents its members with an opportunity to experience the beauty and sophistication of modern architecture.

The 1st meeting of the semester is scheduled for Wednesday, September 3rd, at 6pm at Crown Hall Lower Level Room 104. For more information, check out the Arquitectos website at http://www.iit.edu/~arq.

Arquitectos can be contacted at this address:
S.R. Crown Hall
3360 S. State Street
Chicago, IL 60616
Or via email at arquitectos@iit.edu

Commemorating a Pop Art legacy

By Christopher Berenfeld TECHNEWS WRITER

Andy Warhol is considered by many to be the most prolific artist of the second half of the twentieth century. This August, Warhol would have turned 84 had he not died in 1987, and in honor of this anniversary of his birth many people are looking back at his life and his contribution to art and culture. He was born in Pittsburgh, on August 6th, 1928 to Andrej and Julia Warhola, and grew up in a close-knit immigrant community of Eastern European Byzantine Catholics. Through the hard work and sacrifice of his parents he eventually attended and graduated from The Carnegie Institute of Technology (now Carnegie Mellon University) with a Bachelor of Fine Arts in pictorial design. He then moved to New York City where he quickly became one of the most recognized and sought after commercial artists with clients such as Tiffany & Co., I. Miller Shoes, Columbia Records, Vogue, and NBC among many others.

Warhol's career exploded in 1962 when he first exhibited his Campbell's Soup Can paintings, his famous celebrity portraits of people such as Marilyn Monroe, and his series of Brillo Boxes. These works of art captured and would eventually come to define and symbolize the Pop Art movement. Pop Art borrowed elements of popular culture and used it as its subject matter; it sought to break down the barriers between the old distinctions of “high and low” art. Everything from everyday life, mundane objects, ordinary situations to celebrities and fame could now be thought of as “true art.” Warhol experimented with many new techniques of creating his paintings, which often involved mechanical production such as printing and silk screening. He often said he wanted to remove the artist's hand from the visual, and thus, the art would become like everything else in society—a product.

Warhol is most famous for his paintings, but he worked in many other media and on many different projects. He is considered to be an important avant-garde film maker, whose movies can be seen to be the most prolific and influential. Warhol is known as the “architect” of the Pop Art and used it as its subject matter; it sought to break down the barriers between the old distinctions of “high and low” art. Everything from everyday life, mundane objects, ordinary situations to celebrities and fame could now be thought of as “true art.” Warhol experimented with many new techniques of creating his paintings, which often involved mechanical production such as printing and silk screening. He often said he wanted to remove the artist's hand from the visual, and thus, the art would become like everything else in society—a product.

Best of BYOB: Hongs Thai

By Daniel Crandall TECHNEWS WRITER

If you go to Hong’s Thai, you have to have the Crab Rangoon. They have several flavors, but my favorite is the crab meat parking that is not only their best attribute. They come with the menu called “our housemade sauce” and it is absolutely sweet and just slightly spicy. They also have wonderful beverages, worth getting extra for, at BYOB, or for the non-alcoholics in the bunch. First there is a tantalizing Thai Iced Tea. It comes beautifully layered with sweetened condensed milk atop the strong tea, truly a Thai Iced Tea. The second is a Thai Iced Coffee, not for the faint of heart. It has quite a bite but follows up with a nice soothing sweet aftertaste akin to her teabread. The second recommended beer is Kirin Ichiban. It is recommended not only for its Asian origin, but also for its low alcohol content which provides just enough contrast to the strong flavors of the dishes. This beer cleanses the palate, which is necessary going from different dishes each with a definitive flavor. It also pairs well and extremely reasonable for entrees, though the appetizers could be a little expensive. The menu has a plethora of curious dishes, with some extreme levels of spice. If you’re looking to burn your tongue off, this is not the place. The spices used work with the dishes, without the overbear-

Dear Fetish,

Way out of the bed) and jiggle your way to the gym and start exercising because the problem is not him, especially if you do not share his fetish with blubber. If he remains obsessed after you have take over and the fetish becomes the driving sexual act. In this case it seems that your boyfriend has both partners are completely comfortable with the acts and results. However for some the fetishes enjoy the “Dirty Sanchez”, others the “Nightshot”, and still others prefer the down home styling of

Dear SexTech,

It is quite normal for couples to experiment and try “alternative” sexual options; let me be the first to say that a little kinky can go a long way to keeping your love life fresh and interesting. Many couples practice and enjoy “dirty” things to them and their partners. For example some couples enjoy the “Dirty Sancho” others the “Nightshot”, and still others prefer the down home styling of the “Donkey Punch.” For most people these activities are just a small part of their intimate relationship and not the main thing they do together. However for some, this is their only way to take over and the fetish becomes the driving sexual act. In this case it seems that your boyfriend has a predisposition for celibacy. If this sole interest in the fetish is bothering you, address the issue with him, especially if you do not share his fetish with blubber. If he remains obsessed after you have explained to him on your part, then maybe you should roll over (careful not to spunk on his way out of bed) and jiggle your way to the gym and start exercising because the problem is not his fetish but your own self-consciousness about your weight.

Dear Timid,

My partner is a little hairy and while this did not bother me too much before we got really physical, now that I have seen him naked it is a little disturbing. I mean I like the rugged look and the way that he doesn’t shave or cut his hair, but he is much, much hairier than I could have possibly imagined. It’s not even the carpet of hair on his back or the overgrown armpit hair that bothers me. It’s his chest region that I have begun to dread and have nightmares about. How do I ask him to trim a little without trying to change who he is or offend him in the process?

--timid with the bush--

Dear Timid,

While your attraction to and your sensitivity while dealing with Sasquatch and this issue are commendable, sometimes the best approach is the blunt and direct way. Tell him to wax, clip, shave, burn, electrolosize, or any other method he needs to use to rid himself of his primal coat. Grooming and hygiene are a basic human and animal instinct, the fact that he has made it this far in life without realising that it is an issue.

Maybe the direct approach is a little too much for you, try some more indirect passive approaches like: buying him some razors, beard and mustache trimmers, maybe even a day at the spa. Maybe the direct approach is a little too much for you, try some more indirect passive approaches like: buying him some razors, beard and mustache trimmers, maybe even a day at the spa.

Dear Timid,

While your attraction to and your sensitivity while dealing with Sasquatch and this issue are commendable, sometimes the best approach is the blunt and direct way. Tell him to wax, clip, shave, burn, electrolosize, or any other method he needs to use to rid himself of his primal coat. Grooming and hygiene are a basic human and animal instinct, the fact that he has made it this far in life without realising that it is an issue.

Maybe the direct approach is a little too much for you, try some more indirect passive approaches like: buying him some razors, beard and mustache trimmers, maybe even a day at the spa with an included full body waxing. If these not so subtle hints don’t fix the problem, perhaps you should explain to him that you don’t refund flossing after sex. At this point he should get the picture, if not you might need to escalate your involvement by becoming more physically active in his hair removal, perhaps the next time the opportunity presents itself pull out some of the hair with your hands and/or teeth. Who knows maybe he will enjoy it, if not you should leave the cretin.

I t has never been known for its sparkling athletics program, and the caliber of most of the athletes we have never been a straight ‘A’ student. The high school coaches laugh. Things have been looking up recently though. There are new coaches in almost every field now and they seem to have made a good first impression on most of the players. The soccer team is the most notable of these (well mostly because of all the hype surrounding it since it was announced last semester). I had the opportunity to speak to some of the players a couple of days ago and they seemed upbeat about their prospects this semester. The new soccer field looks impressive with floodlights and grass comfy enough to sleep in without a sleeping bag. The men’s team had a hard selection process and there were quite a few cuts made last semester. The women’s team consists of about 15 players and has a few newcomers to the game. They all look like a fit bunch of individuals and show a lot of love for the game. The women’s team is still looking for new recruits to join the ranks and strengthen the team. The first game of the season for the men’s team was on August 31st at 1:30 p.m. and the women’s team was on August 30th at 7:30 a.m. Both of them were home games and it was interesting to see how the new teams performed against experienced opposition. The men’s soccer team did have the opportunity to play 2 Skinner games earlier in the week against other schools and they lost both of them by small margins. The players of both teams had been working hard since the beginning of the semester (most of them were here a week early) to get fit and get rid of any rust that might have accumulated over summer. Their training sessions included a lot of running, exercises and punking. According to some of the players that I spoke to training sessions seemed to have gotten easier since the beginning of the semester but they attribute this mostly to the fact that they are a lot more fit now than they were when they started. Both teams have a lot of potential and seem to be getting better with each practice session. An interesting happening has been the promotion of coach Hitchen (the soccer coach) to the position of director of athletics. It remains to be seen if the soccer team will benefit from his ascension. It was hoped that the upcoming game this semester would be soccer but it seems that due to scheduling constraints it might not happen. Then again there is always the hope that things might go wonderfully right and we might have the game after all. I had the opportunity to talk to some of the players and ask them questions about the team and training. All of them were willing to come forward with their honest opinions and answers about the issues I brought up. The first person I interviewed was Mural Mastan and when he spoke about the first week of training I could see the fatigue of that week return to his eyes as he answered. He said that they had to go out for training about 3 times a day and that by the end of it they were dead tired. But as the week progressed they got stronger and training sessions are not so tiring anymore. When asked about the new coach he said that he felt that the coach had a type of authority in him that was scary and now training sessions are not so tiring anymore. His teammate, Ed Maltby, felt the same way. He said that the team was now fit and training had gotten easier after the first week. He also mentioned that since the players were not used to running so much there had been a lot of punking in the first 2-3 days. Asked about his opinion about the coach he said that he thought the coach was brilliant and that both the head coach and the assistant coach were good soccer players and very knowledgeable about the game. On the subject of women, he was rather cheerful, saying the team being very “hot” right now, the players definitely had gotten a few interesting looks. When I asked him about the two skimmish games that were played he said that they were promising but there were many aspects that the team still had to work on. I also had the opportunity to talk to 2 members of the women’s team Erin George and Julia Makiejus. The first week of training according to the girls was a lot of fun. They also said that it had been a good team building experience and training since that week had been like a math class, i.e. new concepts were being built around previously learnt ones. They liked the coach and had tons of respect for the entire coaching staff. They were really impressed by the fact that he could coach both teams at the same time. The girls are definitely eager about their upcoming game and said that they were totally psyched about it and were raring to go. And what about the famed “fit sports girl” image? Have guys shown more interest in them because of their sports affiliation? For the moment the men’s team had shown interest in them and they seemed to think the girls team is very cute. Now c’mon boys of IIT, you are not going to let them think that the men’s team is very cute. The girls will be a home game and no because it is a Saturday morning. Asked about his opinion about the new coach he said that he thought the coach was brilliant and that both the head coach and the assistant coach were good soccer players and very knowledgeable about the game. On the subject of women, he was rather cheerful, saying the team being very “hot” right now, the players definitely had gotten a few interesting looks. When I asked him about the

the The Hawks fell in their premiere match 6-0 to the Doane Tigers, ranked 5th in NAIA Region IV. Further details were unavailable at press time.
